881 meat tabu was observed. Girls who drank cold water and ate meat got overly fat.[243] Like M.L., M.P. said "girls followed the moon, and boys
841 the sun," but added that "girls were always
805 sick on the full moon," which is, of course, impossible. Girls gauged the expected arrival of their periods by the condition of the moon from month to month, as explained by M.L. In the old days, said M.L., a menstruant cooked for the family as usual, but she slept on the opposite side of the house from her husband and intercourse was strictly tabu.

881 During adolescence both boys and girls were sent to swim at night. The informant J.B. gave this practice a name, pa'duwiš, and defined it more rigorously than others. For thirty nights during the coldest, frostiest weather (December-January), a lad or young girl was sent out three times each night, once just after he had fallen asleep, again halfway through the night, and again near dawn just before the other members of the household would be arising for their own swim. The youngster who slept soundly was given a vigorous poking until he got up and went out. The swimmer ran back wet to prove he had immersed himself; he dried and warmed himself by the low fire and jumped back into his bed. The purpose of these efforts was to produce a physical and mental hardiness. After adolescence a person of character continued the practice, though not quite so rigidly, i.e., one dip a night was sufficient. It took some fortitude on the part of the parent who himself must waken to see that his sons or daughters were roused each
● [751] night three times: J.B. said, "old men sometimes lost their children because they wouldn't see that they did this right each night." People often did the same thing in the summer-
[515] time and those who did "never got sick." Such bathing was of an extra and special sort: it was taken as a matter of course that one swam at daybreak every day merely as a matter of decent behavior and personal cleanliness.

861 J.B. added that every man talked to his own children, especially his sons, telling them how to behave, to be industrious, and to be respectful toward supernatural manifestations. Both boys and girls learned their duties and techniques of work from their father and mother by association, emulation, and specific instruction.

Marriage.

582 The only regulation of marriage was a restriction based on blood relationship. All Wukchumni informants claimed that a relationship as distant as third-cousinship was a tabu to matrimony. A marriage with such a relative

[164] [243] M.P. attributed the obesity of a certain old woman, who was obviously tumorous, to infringement of the meat tabu.

1: Gayton E-6 (1925-1930) 1948 N529 Yokuts N529
[EP. 173 bJ Kechayi

789 about it." She did not know of B.W.'s father doing this. She thought the doctor dipped some feathers in water and prayed; the wind came first and then rain.

184 796 751 Snake ritual.--This was not performed north of Kings River: "the best doctors were always that way [south]." But in spring everyone wore an abalone charm (čuneki) while seed-gathering; this made the snakes rattle while still at a safe distance.

Jimsonweed Ritual

796 276 The ritual (tañi ʔa) of drinking jimsonweed (ta ñai) was held each spring by the Kechayi. The informant had never taken jimsonweed herself but had seen it administered at Šanwoganiu (Millerton) by an old Chukchansi man named Hoi ʔyop (lupine). After consultation with the village chief, the date for the ritual was publicly announced. The announcement had to be made at least twelve days in advance, during which time prospective participants assumed a liquid diet [seed or acorn soup]. The drinkers were twenty to thirty years of age, of both sexes. While the ritual was given in the early spring of each year, only rarely did a person participate annually. The ultimate purpose was "to have good health," but it is unfortunate that E.M. did not know of the immediate aim, which we can only presume from other information was to obtain a helping spirit -- a dream helper.

A few days before the ceremony the participants left home and were housed in the homes [292] of relatives living some distance away. They all wore "koikoi belts"[74] which they tightened up to ease the pangs of hunger.

On the morning of the ceremony the drinkers assembled outside the village, where they were joined by the leader bearing a bundle of jimsonweed plants on his back. They all ran once around the village (they did not jump over a hoop). The leader then went to the usual assembling spot for the village; as he approached he sang and talked saying that "ṭ:pni is coming." There he mashed up the plants in a large basket and poured water over them. The drinkers were arriving also, each with a woman singer following. The spokesman (yate'ːč) was present: he [554] told them to come closer to the central basket; when the drink was ready, he pointed out the order in which it was to be administered, who was to be first, next, and so on. Everyone present sat down. Then the leader filled small baskets with the decoction and gave one to each participant. He sang continuously. At his signal all drank: there was no "delayed offering" of the drink. Usually the effects were felt at once: the men and women began "dancing

[74] A belt with koikoi beads woven into it, worn on dress occasions, as shown in fig. 13, g, Pt. I.

Medicines

278 824 757 Medicinal plants and materials were not stored but were gathered as needed. Ordinarily, when a person was hurt or slightly ill, people would tell him about medicines they knew, would get and prepare them, and either give instructions or apply them themselves. American [177] medicines are bought now: "it looks like they work better," said J.R. Several medicines were known to this informant.

A plant called pasal (Miwok?) which sprouts in spring, has leaves three to four inches long shaped like beech leaves; the leaves are always sticky. A leaf of this was placed in the mouth, but not chewed, and the saliva swallowed when one had a cough or cold. The same plant was used as a boiled decoction for rheumatic pains. About a handful of leaves would be cooked in a pint of water to make a strong dark liquor; this was washed, not rubbed hard, on the afflicted part at night.

Another bush, called lokot'i, was like pasal, but a bit larger with larger leaves. It was put to similar use. The bush grew along creeks and in rocky places in the mountains.

A plant called 'opkule, with yellow flowers and roots a foot long, was boiled to make a soothing medicine. Leaves and roots, but not the flowers, were cooked and the hot liquor was rubbed on painful spots. "It will stop pain pretty quick." All these decoctions were used on open wounds, but they were not potable.

A vine which climbed "just like a grapevine" was boiled and the liquor used to wash cuts, which were said to heal quicker and not to be painful when so treated.

[752] A medicine for rattlesnake bite was known but not considered as effective as a shaman's cure (see "Rattlesnake Shaman"). This was a plant "which grows with a little bunch on the end of it, called s'o[illegible]." It was boiled and the liquor washed on the wound. It "usually" cured the bite. When this method was used, the shaman's services were not.

[751] To prevent snake bite women who were going seed-gathering would rub the flower and leaves of the tea plant (dowunnil, peppermint?) over their feet, ankles, and legs. The smell alarmed the snake so it would not strike, or at least would rattle a warning.

Wormwood (mesini) was used for rheumatism, said N.W. It was rubbed between the hands to extract the juice which was then rubbed on the sufferer. Sometimes the plant was soaked in water and the solution used to lave with: "you took a bath in it." The same solution was used for ceremonial washing at the Mourning Ceremony.

Peppermint tree (?) was "good for rheumatism and for swelling up."

A drastic cure for rheumatism was the application of fire to the painful area. The

1: Gayton E-5 (1925-1930) 1948 NS29 Yokuts NS29
EP. 246 a Western Mono N 25

take it at least once, and perhaps in several successive years. A powerful doctor would take it at the same time as the plain people. There were more men than women partakers: the men "took it to find out things," the women "just to be doing it," S.O. thought. It was regarded as a kind of insurance of good health throughout life.

The leader of the affair did not have a special supernatural knowledge of, or dream relationship with, jimsonweed; his knowledge of the plant and how to administer it was believed to come from practical experience. He had no title, said S.O., "he was just called ma ta ʔnai wa ʔnamuts" (you jimsonweed give). But he was always elderly and well thought of.

About midwinter those who intended to drink jimsonweed in the spring would inform the leader. He instructed them to abstain from meat or grease for about two or three months before the probable time of drinking. They were also expected to remain rather quietly at home, not participating in hunting, in ceremonies, or merrymaking. The actual day of the drinking was announced six days in advance by the chief's winatum, after the leader himself had set the day. From then on the participants subsisted on very thin acorn gruel, and on the morning of the day ate nothing at all. All these restrictions were observed by the leader, although he did not partake of the drink.

At the time of the drinking, the participants met the leader at the village dance space; onlookers, especially relatives, were present. The leader had with him uncooked jimsonweed on a tray, the leaves and stems of which he mashed, put in a large basket, and covered with water. As he did this he talked to it, asking it "not to hurt these people but to help them." There was no singing or dancing, but the drinkers made a circuitous run around the dance space. Then they sat down in a row and each was given a drinking basket full of the liquid (about one pint). There were no ritually repetitive offers or attempts at drinking. They were instructed to drink it rapidly without smelling it, as the odor was nauseating. Soon the drinkers "began to tremble all over and fall down." They were carried, by persons assigned to the task, to shades[190] set near the fire so they would not become chilled after sundown. Toward dawn of the next morning the drinkers began to move; some would sit up, others reach about, but all were yet speechless. Then, becoming restless, they would get up and, as they grew more active, they were guarded against flight or self-injury. "If they saw bears, they wanted to run off." As soon as they were able to walk they would be

[190] Exactly what or where these were S.O. could not convey, except that they were "little houses near the fire." They were probably especially built booths such as the Yokuts were adept at constructing for spectators and visitors at their frequent ceremonies.

1: Gayton E-5 (1925-1930) 1948 NS29 Yokuts NS29
EP. 247 [illegible] NS25

W Y 796 276 morning of the rite they "ran once around the village; down at Kingsburg [Wimilchi territory] they ran around the house." Then they knelt on a blanket. The two leaders sang songs about the narcotic, then held the basket of liquid to each drinker's lips. If the first dose were not effective, more would be given. When the drinkers fell over unconscious, they were carried to their homes. They slept about twenty-four hours. But when they roused from this, they did not cure others of sickness by brushing or in any other way perform for public benefit. The narcosis was believed to be a preventive "good medicine" for the drinker himself.

W Y 752 Jimsonweed was used as an anaesthetic when broken bones or painful injuries were treated. The sufferer was given enough of the decoction to keep him in at least a seminarcosis for forty-eight to sixty hours. Such treatment was given by "anyone who knew how to mix it."

W Y 796 276 The two Choinimni who died from the effects of jimsonweed were mentioned by B.O. However, his version was that they did not observe the meat tabu. He said that they ate meat "right up to the day and drank the next morning though everybody told them not to. They died that night."

Rattlesnake Ritual

W ● Y 796 825 ● 751 756 The Waksachi had neither snake doctors nor the Snake Ritual, but both informants had seen the performance, B.O. at Squaw Valley, at a village on Kings River, and at Dunlap, and S.O. at Squaw Valley. In all these rituals Choinimni doctors were either the instigators or central figures. S.O. described the ritual as he remembered it at Squaw Valley, a Chukaimina-Michahai area.

There were two doctors, Čokonːk and Pušlːlːn, who were snake doctors (te'e 'li čecisu'm, lit., rattlesnakes pet-their). They made this dance every spring about March just before the rattlesnakes were ready to leave their dens. The purpose of the ritual was to prevent persons from being bitten during the coming season.

These doctors went to a rattlesnake den, taking with them eagle-bone whistles (pusač), cages of twined stiff grass, and eagle down. They whistled for the snakes and fed them eagle down when they appeared. They talked to them gently, repeating constantly, "Maiya ''ːn" (keep quiet!). The snakes understood and permitted themselves to be picked up by the back of the neck and put in the baskets. Carried home, the cages were hung up outside until the appointed day. The day for the ritual had been chosen with the chief's consent and set [at least] six days in advance. The winatum went around announcing the affair and "told everyone to come and have their money ready."

W Y 796 825 751 756

On the day set, the winatum dug two holes in the dance space. These were about 4 feet apart, about 2 feet deep, and 1 foot in diameter. The snakes were put in these and sprinkled with eagle down. The doctors, who wore the usual feather dance skirts, were lavishly ornamented with eagle-down strands around their necks and bands of down rope on their arms.

When all was ready the chief announced that it was time to pay, whereupon all present filed past four or five singers who were holding baskets, and threw some money in them. The line passed across the snake pits, and each person stamped beside the pits as he crossed them.

Čokonɨk and Pušlɨlɨn each stood beside his pole and, holding a large basketry tray in a vertical position, face outward, swung it slowly back and forth. Everyone, men, women, and children, chiefs, shamans, and winatums, took part in this. Then they all sat around as spectators while the snake doctors displayed their abilities.

The singers were singing continuously, and the managing winatum told the doctors to get their pets. The doctors picked up their snakes and put them on the trays where they lay coiled. They talked to them continually, saying "Maiya ''ɨn, maiya ''ɨn." They walked about close to the onlookers.[192] Then the chief would have his winatum ask for the "handling," at which the doctors put the snakes on their shoulders allowing them to crawl around. Then the chief asked for the "biting," and for this spectacle the doctors were again paid. The snakes were laid on the ground and angered by teasing with eagle feathers. The doctor held out his hand so a snake struck it. Winatums immediately carried the stricken doctors to shades or a house where a snake doctor from some other place sucked out the wounds. "The snake doctors never died from this because Snake was their poša."

S.O. added that the next morning the reptiles were returned to their dens; if their "owners" were still too sick, winatums were sent out with the snakes.

W Y [522a]

Coyote clowning was not a specific part of this ritual as done by the Choinimni. (See Coyote clowning, below.)

The account given by B.O. was brief and less knowledgeable than the foregoing.

To get the snakes the doctors (ṭu´dum) went to the snake dens carrying whistles, trays, and cages made of tule. At the rock pile they whistled to the snakes, who came out and were "herded round" by the doctors. One or two were selected and, when they coiled, they were lifted onto trays and thence into the cages. The cages were hung upon shades at home until needed.

At the ritual there were two singers. The doctors "danced around," letting the snakes "crawl all over them." Another man followed

---

[192] To discover who was going to be bitten? See Wobonuch account (p. 285).

W Y 796 825 751 756 [541]

with a basket to collect the pay. A chief, through his winatum, ordered that the doctors be bitten. A doctor would throw his snake on the ground, then pick it up by the tail. When it turned and struck, he released the tail so the creature hung by its fangs. A doctor who did this would be sick for two or three days; he would be cured by another snake doctor. "There was no purpose to this dance except to make money."

Various Dances

W Y 796 541

Bear Dance.---According to B.O. the Waksachi had no Bear dancers: the one man who transformed himself into a bear did not dance. This is curious and somewhat dubious since the Wobonuch Western Mono, as well as surrounding Yokuts, had such performers in their Bear lineages. B.O. said that he saw a Bear Dance (noho'o kam) at Tušao given by two men and one woman "who had come from somewhere. They were some relation to Bear." This was in the fall.

S.O. stated that relatively few people had Bear as a family totemic animal; this possibly explains the Waksachi situation. At Squaw Valley there was a Chukaimina named Ko''o who danced, but the Wobonuch dancer, Supa'na, most impressed S.O. One or two daughters of these men usually danced with them. S.O. gave the following description.

The Bear Dance was made in September before the acorns were ripe. The men wore belts of blue-jay feathers [sewed together through the quills] and bear-claw necklaces, but no bear hide. [The girl's costume was not described.] The two accompanying singers used cocoon rattles. The dance step was, for the men, three jumps forward, a move backward toward their previous position: this was repeated three times. Meanwhile the girl stood at one end behind them, remaining in her place and holding up her hands with elbows close to her sides, and swayed her torso slightly from side to side. No matter how greatly the performance was admired, it could only be repeated once; i.e., there might be two complete performances, one original and one encore, as it were. Spectators paid the singers, who collected for the dancers and shared in the collection. The dance was given in the morning and a feast with new acorns followed.

S.O. could not say who provided this.

W Y [789]

Skill as a Bear dancer was not related in any way, S.O. thought, to the ability to transform oneself into a bear, of which he seemed to know little. He had heard in all his life of just three men who could do this, a Tachi, a "southerner," and a Wobonuch, but he did not know the men personally or by name, nor did he know how the transformation was accomplished.

Beaver Dance or fish display.---This S.O. had heard of but could not describe. He claimed the performance was given by only two

3: Latta Y-5 (1923-1948)1949 NS29 Yokuts NS29

chief and other important members of the tribe, including sometimes the medicine man. Among some tribes the drinking took place in the open after the talk by the chief.

Immediately after the drinking of the tea, which was very bitter and often caused repeated vomiting, necessitating the drinking of large quantities of it, the young initiate was given into the care of some old and respected member of the tribe. It is said by some Indians that this man was generally selected by the father of the boy because of some attachment which the boy had formed for him. He became a sort of godfather or counselor. This relationship often continued throughout life. It is said by early American settlers that, before entering into a bargain, it was not uncommon to see a Yokuts seventy-five years of age go for advice to his godfather, who was ninety.

When given into the charge of this godfather the boy was taken into the hills beyond, or along a stream, and watched over and counseled until the period of stupefaction had passed away. This is known to have lasted several days. During this time the initiate was instructed in the tradition and history of his tribe and was given such advice and instruction as was calculated would make him a good citizen among his people.

Among some tribes this ceremony was the most elaborate of any they performed. Ceremonial equipment of the most spectacular kind was exhibited to the young tribesmen. This equipment was often never seen by him again and was calculated to impress him with the importance of his duty to the tribe.

The visions produced during this exhibition, due to the nature of the narcotic taken, undoubtedly created a deep impression and lasted throughout life. I have in my possession three large spear points which are thought to have been a part of such initiation equipment. The largest is approximately eleven inches in length and two inches in width. The smallest is about nine inches in length. These would undoubtedly have been wrapped in protecting moss and buckskin and given to the care of the property man of the tribe, who guarded them between the times of their use.

It is of interest to know that even the seeds of the Jimson Weed were thought by the Yokuts to have supernatural power. The seed would keep off sickness and prevent bad dreams. I have in my historical collection a necklace of these dry seeds made in 1932 by a Tachi woman and presented to a member of my family for the purpose of warding off influenza.

3: Latta Y-5 (1923-1948)1949 NS29 Yokuts NS29

796 statements. The first one was taken from Ichow, who, when he passed away in 1937, was the last chief of the Wukchumne:

796 159 756 "When I was about eight years old I go to Dunlap with my mother to see her father, *Chechin*. He was rattlesnake doctor. When we get there, them Indians have big rattlesnake dance. My grandpa, Chechin, he was big man in that dance. I saw all of it.

"Chechin and one Dunlap rattlesnake doctor put on that whole dance. The night before that dance I have to sleep with Chechin. He hang his basket with rattlesnake in on wall over our bed. I have to sleep next that wall. I don't like that. In night rattlesnake wake up and rattle little bit. Then I wake up quick. I think, 'He's comin' out.' So I poke Chechin with my elbow and tell him, 'Grandpa, that rattlesnake he's rattlin'. I think he's comin' out.' But Chechin he say, 'He just dreamin'. He dream he see something. He no wake. He sleep. He no comin' out.'

"I listen long time. I don't hear any more rattlin'. But I don't sleep much more that night. After that I sleep some place else. I think I not gonna be rattlesnake doctor.

"Them rattlesnake doctors do that dance to make money. Them people pay them doctors so they won't get bit by rattlesnake that summer. Them doctors dig two holes in ground. They then put baskets in hole. They call them baskets *Tawits* (Tay'-wits). They put soft eagle feathers in baskets. They put snakes on feathers. They sit beside that basket with legs crossed. They put *Chapet* (flat basket tray) beside them.

"Sometimes them doctors take snake out of basket, hold snake in hands and dance around among them people. Then they put snake back in Tawits. People dance around in circle and stop, put bare foot in Tawits over rattlesnake. If snake no bite they throw money in Tawits, or on Chapet. Some put ten cents, some two bits, some fifty cents; some one dollar. Then [751] they don't get bit until next spring, when they have 'nother rattlesnake dance just before them rattlesnakes come out."

Pohut, a Wukchumne who lived his entire life about Lemon Cove and Woodlake, attended several rattlesnake dances, including the last one held. He knew more details of the ceremony, including the manner of catching the snakes and handling them. His story follows:

"I help my grandfather, Chechin, [Pohut was a first cousin to Ichow.] catch his rattlesnake when we go to that

3: Latta Y-5 (1923-1948)1949 NS29 Yokuts NS29

159 "When we go to them tawits I go with my chawmish snake
756 basket. Chechin go 'head. He take step to one side, then step
796 to other side in time with them Uhdukut singin' and dancin'. Them other snake doctors do same thing. Then Chechin take snake out my chawmish basket. He hold left hand under snake's head, hold front off snake's body along left forearm. He hold middle of snake with right hand and rest of snake on his right arm.

"Each Trudum dance 'round with his snake. His relation dance 'round behind him. All time them Uhdukut singin' and dancin' one-step dance.

"While them Uhdukut singin' and dancin', them people go in circle in front of them Trudum snake doctors. They hold one bare foot down over them snakes. Then they throw Indian shell money, or white man silver money in Tawits with snakes. Some Tawits got more beads and money than snake. People
[751] take their children through circle, too, so they don't get snake-bit that summer.

[522] "Them Uhdukut got one clown doctor called *Kiyu* (Ki'-yoo, Coyote). Everybody call for Kiyu. Kiyu was Indian named *Sahlahpun*, from Tule River. Kiyu pick out bad snake and tease it. Pretty soon that snake get mad. He strike Kiyu
159 on back his hand. Then them Trudum snake doctors try to
755 save him. They pay him lots money, 'bout fifty dollars for that
796 job. They rub ashes on him. Then they cut where that snake bite and suck on it through wood pipe made from elderberry limb. They take out bad blood, green things, maybe squirrel bone, or hair. Then Kiyu get well.

159 'It's Kiyu's business to make lots of fun, too. He run
756 'round and get in them Uhdukuk, snake doctor's way. He do
796 that at every place I see that rattlesnake dance, Porterville,
522 Dunlap, Centerville.

"Sometimes them Kiyu got bad luck. Once *Puslilin*,
159 (Poos-lill'-in) from Squaw Valley, was Kiyu at dance at Dun-
756 lap. He tease big snake. Chechin tell him, 'Better you take
796 little one'. But Puslilin want big one. Then Chechin take
777 Puslilin away and talk to him. He tell Puslilin he see buzzard kill squirrel. That sure to mean real bad luck for somebody. That buzzard catch live squirrel and carry it high up in air and drop it. It fall on Puslilin's bed. Then that buzzard come down to eat that squirrel. But it on Puslilin's bed, so he 'fraid to take it. He go away. That's sure real bad luck for Puslilin.
